

TECHNICAL DATA SHEET

RPI Pipette Filler, Rechargeable, Motorized 248646

The RPI Pipette Filler fits all glass or plastic pipettes from 1 - 100 ml. Features eight speeds for aspirating and dispensing liquids with high accuracy. Lightweight ergonomic design allows one hand operation and reduces pipetting fatigue. Individual controls are provided for aspirate and dispense operations. The unit fills a 50 ml pipette in less than five seconds and dispenses liquid by gravity flow or motorized operation.

Package includes built-in Lithium-ion battery, LCD panel display, battery charger and two hydrophobic 0.45 um filters. Three (3) year warranty.

Tips for Using Pipette Filler:

If the unit, battery or the charger stop working, check each of the following:

1. Is the LCD display working?
2. The light on the charger should be green when NOT connected to the pipette filler
3. When the charger is connected to the pipette aid it should change from green to red.
4. Also the battery bar should pulsate indicating charging when connected to the charger.
5. The unit should run normally when connected to the charger, even without a full battery or no battery
6. Has the battery been removed and reconnected? If so, the red battery wire should be closer to the pipette than the red wire. The black battery wire should be closer to the LCD display than the red wire.

If unit stops working and the above tips are not successful, please call us.
